Reading worksheet

A2 – Worksheet 4: The Eagle

THE EAGLE

The eagle is a powerful bird of prey. There are many different species of eagles, and they live in different parts of the world.

Eagles have excellent eyesight. They can see small animals from very far away while flying high above the ground. Their strong claws and sharp beaks help them catch and eat their food.

Many eagles build their nests high in trees or on cliffs. They usually return to the same area to raise their young. Eagles are important predators because they help keep natural ecosystems balanced.

Exercise 1 – Choose the correct answer.

What type of animal is an eagle?

- a) A bird of prey
- b) A sea animal
- c) A reptile

What is especially good about an eagle's eyesight?

- a) It is very poor.
- b) It is excellent.
- c) It only works at night.

Where can eagles build their nests?

- a) Underwater
- b) High in trees or on cliffs
- c) Underground

What helps eagles catch their food?

- a) Their claws and beaks
- b) Their wings only
- c) Their tails
